Cast acrylics have thickness variations that may present difficulties in applications where thickness tolerance is important (i.e. fitting into extrusions, thermoforming applications where walls must maintain uniform thickness and assembly of complex structures). Check gauge when non-contact engraving takes place, and periodically re-check focal lengths when laser engraving. Multiple passes may be required when lasering certain gauges.

Colorhues® Glitter can have shifts in color due to the dispersion and reflection of glitter particles.

Cast acrylics have thickness variations that may present difficulties in applications where thickness tolerance is important i.e. fitting into extrusions, thermoforming applications where walls must maintain uniform thickness and assembly of complex structures. Check gauge when non-contact engraving takes place, and periodically re-check focal lengths when laser engraving. Multiple passes may be required when lasering certain gauges.
