

BIOCORE™

Rowmark BioCore™ is a next-generation acrylic sheet material designed for precision laser and rotary engraving. BioCore™ delivers the durability, engraving performance, and professional finish customers expect from Rowmark, with a biodegradable* formulation that returns to the earth over time.

BioCore™ is engineered for lasting performance and will not biodegrade during normal storage, handling, fabrication, engraving, or finished use. Its specially formulated additive technology is designed to activate only after disposal in anaerobic landfill environments, where little or no oxygen is present.

This material is a responsible option for signage, plaques, nameplates, awards, and identification applications without sacrificing performance.

**For more information on BioCore™'s biodegradation claims, visit rowmark.com/products/BioCore*
