

Rowmark's Commitment to the Environment

Rowmark LLC, as an industry leader in the manufacture of extruded plastic laminates, has been developing, manufacturing and distributing innovative products for over 20 years. We take our role in environmental stewardship seriously and are committed to minimizing our environmental impact, while continuing to offer the highest quality products and services in the industry.

We stand committed to producing materials in our Findlay, Ohio manufacturing facility, with the safest and most environmentally conscious processes possible, and are continuously evaluating new ways to make all our products environmentally friendly for the good of our community and nation.

Within this context, engraving laminates are highly specialized products with a sensitive tolerance to variations in composition. Plastic products manufactured and supplied by Rowmark do contain pre-consumer recycled plastic when applicable and available. Rowmark utilizes pre-consumer recycled plastic when and where product specifications permit, averaging 20% in select products. Once a Rowmark material is consumed, it can be recycled. We encourage our customers to explore recycling options with Rowmark materials. In addition, the waste from our manufacturing processes can be reclaimed and Rowmark does not landfill manufacturing waste materials.

Rowmark operates in ethical, socially responsible and innovative ways that exemplify resource efficiency through the prudent use of materials and resources. We proactively strive for continuous improvement in our performance wherever possible and practical. Our environmental guidelines look to encompass the most current scientific, business and social environmental practices.

Our guidelines include:

- Responsible resource use
- Elimination or significant reduction in the use of hazardous materials
- Elimination or significant reduction of emissions to air and water
- Sourcing materials, products, and services from environmentally conscious suppliers
- Providing customers with accurate information about the performance of our materials
- On going research and development to ensure Rowmark products and services continue to be on the leading edge of environmental thinking, concepts and performance.

The sustainable application of materials, resources and services continues to be a key priority for Rowmark, LLC as we remain committed to environmental protection, social responsibility and economic progress.
