

FlexiBrass® Jewelry

INSTRUCTIONS

Here we have a cool little project that makes a great gift!

We used FlexiBrass® Brushed European Gold/Black

1. Import your design and adjust power and speed settings.
2. Mask the gold side of your material so the laser doesn't char it when cutting.
3. Tape the plastic sheet panel to the bed to ensure it doesn't move.
4. Start by engraving the design out of the full sheet. This will help it from moving and alignment when cutting.
5. Next, cut the outer shapes by using the capture feature.
6. Unmask, and carefully fold earrings to align the holes on the ends, then attach to earring hooks.
7. Use round jump rings to attach your three cut pieces to one another, then attach chain to either side.

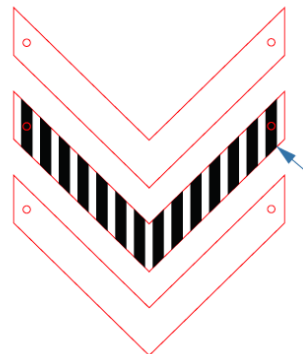

There ya have it! A quick gift that makes a huge personalized impact!
